As you know, many users face this problem and want to know how to bypass Google factory reset protection on their Android device. Google Factory Reset Protection is a new patch developed by Google that protects users of the device if lost. This tool is very useful at a time when you have a factory reset of your android device and forget your Google Account password. So keep reading this guide to know more about this tool and how you can use it. What is Google FRP Bypass APK? As mentioned above, Bypass Factory Reset Protection is a security patch that is developed by Google. Helps protect your device if it's stolen or lost. No one will be able to bypass FRP because you need access to your Google Account. FRP bypass feature was first introduced for devices such as LG, Samsung and many others. No doubt it is an awesome security feature, but it creates a lot of problems if you forget your account password. File name FRP Bypass.APK File size 1.2 MB File type application/vnd.android.package-archive File extension Downloads69526755 Version 2.0 Click here to download simple FRP Bypass APK file

FRP Bypass APK: Google Factory Reset Protection Easily All android smartphones and tablets that are running Android 5.0, come with this security patch. To bypass the android frp lock, two guides are available. Just follow the simple steps for FRP bypass surgery. Especially with this guide, you will be able to bypass Google FRP lock easily if you have lost your device or forgot your account password. For the first method to bypass FRP, you will need a USB drive, OTG cable and PC. Once you have these requirements, follow these steps: FRP Bypass with OTG First of all you will need to download FRP bypass APK from our official website. You can check the download link above. After downloading the file, copy the frp bypass APK to the USB drive. Now start the Android device on which you are facing frp problem. Then the Setup Wizard opens where you need to follow the instructions based on it. When the Bypass Reset Protection screen appears. You'll need to enter your Google Account login. But because you lost your phone or you don't remember it, you'll have to try something else. Now using an OTG cable, you will need to connect a USB pen drive to your Android device. Then you will see explorer opening on your android phone. Then open the folder on your Android device where you saved the file APK Bypass. During the installation process, your phone will block the installation and you may receive an unknown source error. Simply go to your device settings and turn on unknown sources. Resources. tap the installation button again to start the installation process. When the installation is complete, tap Open to open the settings menu. In settings, scroll down and select backup and restore. Then tap refresh your production data, then tap Confirm. That's it! You successfully bypass Google factory reset protection on your Android device. Now you have to restart your device and you won't face frp bypass problem anymore. After you restart your device, you can choose to add a Google Account or skip it. FRP Bypass APK Requirements Android device running Lollipop or above the android version. Working Internet connection for downloading the required files. Windows PC How to bypass Google Factory Reset Protection without OTG The first method that we shared above requires an OTG cable along with to bypass Google's factory reset protection APK file. But with this method, you do not need to use OTG. Because we will use the FRP bypass tool, so make sure you have a working internet connection. So let's get started: First you need to turn on your Android device. The Setup Wizard appears. Follow the on-screen instructions when the FRP bypass screen appears. You'll need to open the keyboard and tap its settings. Next, you need to tap the menu button and then the help and feedback button. Next, you must specify what you want to write and choose to share. Then select the messaging option, then a new message, and enter any number in the To section. Then select it and tap the contacts icon. Then tap the call icon button and tap the new call option. When you open the dial pad, you'll need to enter \*#\*#4636#\*#\* Now tap usage statistics and tap Undo. Then go to the settings menu. Then you'll need to click the backup and reset option. Select and confirm the refresh of the production data. That's the boys! You've successfully bypassed Google Account verification with FRP bypass. Screenshots of this guide are attached to make it easier for you to follow these steps. I hope these two methods have helped you clear up your doubts about how to bypass Google's factory reset protection. Custom Binary Lock FRP Fix When a user roots a Samsung device, the custom binary lock automatically gets used. Which means that by default FRP bypass gets activated. So your access to your phone's own recovery is also blocked. If you are facing this problem, you must follow the instructions below. Make sure you have Odin 3 download and working PC. Next, follow these steps: First you need to download the tool here. Then expand and install it. Next, you'll need to select your Samsung device and hold down the Home button, power button, and volume buttons. You will then receive a system software update notification. To use the software, you will need to hold the key to increase the volume. Now open Odin 3 and connect your Samsung device to your computer. Once your device automatically detects, then you will need to select zip files from the file that Above. Then tap the Start button to upgrade your device software version. After the process is complete, you must disconnect and restart the device. It is one thing to keep in mind let your upgrade system install the necessary things, so wait a few minutes. With this method, you will be able to unblock bypass the factory reset protection lock. That's it! Now your own binary FRP lock problem is fully fixed.
